Checking Windows Updates History

Your operating system must be up-to-date with all critical security updates and patches to be best protected against intruders but also to better serve you as a user.

1. Start → Programs → Windows Update
 - a. This will open a web browser
 - b. If a pop-up menu displays asking you to download an application, select yes or run. This application is safe and approved by Microsoft to automatically detect the status of your windows drivers and utilities and then to determine if your system requires updates.

OR

2. Open a web browser of your choice
3. Browse to <http://windowsupdate.microsoft.com>
4. Click “Review Update History” in the Left-hand Pane.
5. Look for your most recent update. If the date seems a bit old, it probably is. Run Windows Updates just to be safe.

That’s it! You’re Done!
