I. Course Description:
In this course, we will be examining various aspects of student assessment including test construction, administration, scoring, and interpretation of results. We will focus on the use of test data to make educational decisions for students, with an emphasis on developing programs for students with special needs. Attention will be given to both norm-referenced tests and curriculum-based assessments.

II. Course Aims and Objectives:
Students in this course should be able to:

- Demonstrate an understanding of the purposes and processes of assessment in special education.
- Construct, administer, and interpret effective formal and informal assessments.
- Administer and interpret appropriate standardized diagnostic instruments.
